

# NSG

legacy management

## Employee Spotlight

**Roxy Fisher**  
Senior Mechanical Engineer  
Joined NSG in 2021

### **Q. What was your impression of the nuclear industry before you started working in it?**

A. I knew very little beyond what you see in mainstream media (think The Simpsons and an ominous green glow!) right up until my university years. Then, when I started looking into the UK's energy mix and the path towards being less reliant on fossil fuels, I realised how important nuclear really is.

### **Q. Describe your career journey to this point.**

A. Having spent a year working on steam cycle heat recovery generators sandwiched between university studies, I firmed up my choice to head into the energy industry after completing my degree, but with a focus on contributing to a more sustainable future. I was very excited to join the Atkins graduate scheme in the Nuclear and Power business, where I almost immediately started working on a legacy nuclear site on a decommissioning project. The joint client-contractor team there gave me an incredible start in the industry, challenging and supporting me in perfect balance as I developed and took on more responsibility. Fast forward to today where I'm acting as a technical lead on a very similar project; it's safe to say that the people on my journey so far have had a huge impact on my growth but also my enjoyment at work.

### **Q. What do you enjoy most about your role?**

A. Working with a brilliant team, having the freedom and trust to challenge myself and set ambitious goals. While it's easy to get lost in the day to day, I am fully appreciative that through my role I'm able to contribute to the nuclear industry and I hope that even in a small way I'm helping change public perception on the future of nuclear within the UK.

### **Q. What three words would you use to describe working at NSG?**

A. Collaborative, supportive and most definitely engaging!

### **Q. Where do you see your career heading in the future?**

A. I'm looking forward to gaining more experience working with legacy sites and delivering engineering solutions to the challenges involved in decommissioning! In a non-technical way, a further goal of mine is to be more active in supporting new engineers joining the industry, both internally at NSG and externally too.

### **Q. What advice would you give someone looking to join the nuclear industry?**

A. There are a huge range of opportunities to get involved in, at all levels and professions. Explore one or two and you're bound to cross paths with some extraordinary people with incredible stories!
